

# #186 Amix/M Series Mix Minus Board Room

General Layout [24 Sep 01]

## Application

One Amix 4 will provide for automatic gating of the 4 monitored channels and keep them separate to the M Series matrix for mix-minus purposes.

Each Amix 8 will provide for 8 channels of automatic input gating. A link Module per mixer will allow for all mics to be summed to a single output. Every time that the number of open mics is doubled, the Master Output will be attenuated by 3dB. The Master Output will then be fed to the M Series matrix for routing, along with all other inputs, to each M Series output. A bonus feature with the Link Modules is the ability to control all Amix units via RS232.

Null Modem Connection
