

Tech Note

#129 Matrix Surge Protection

[1 Oct 2002]

Onboard CPU's!

***Note:** Intelix does not manufacture Surge Protectors.

All of the Intelix matrices are driven by CPUs which perform thousands of functions per second. This level of digital control offers you the utmost flexibility in your application. For this reason there are built in fail safe features which will protect the hardware from damage due to irregularities in the power main.

ETA PD11LVP

However, all CPU based systems can suffer from lightning strikes or other such power surge related anomalies. Do you have a surge protector on your personal PC at your home? Odds are, you probably do.

Along with Matrix surge protection, the ReO bus of an Intelix matrix is also susceptible to voltage surges and lightning strikes. A couple extra dollars can save thousands of dollars worth of audio equipment.
